PROFILE SUMMARY

DevOps/DevSecOps Engineer with hands-on experience automating deployments using AWS Amplify, Docker, Kubernetes, and Jenkins CI/CD workflows. Skilled in optimizing cloud costs, improving deployment efficiency, and enhancing system reliability across AWS environments. Strong foundation in IaC, security scanning, and monitoring with Prometheus and Grafana.

EDUCATION

Dnyanasadhana College
BSc.IT

Thane, Maharashtra
2021

SKILLS

Tools: Jenkins, Kubernetes, Docker, Terraform, Bash/Shell, Grafana and Prometheus, Github, SonarQube.

AWS: Amazon Amplify, S3 Bucket, ECS, EKS, IAM, AWS Secrets Manager, RDS, DynamoDB.

EXPERIENCE

The Thirsty Crow Marketing Services - Database Executive

2023– 2024

- Deployed a **registration web page** on **AWS EC2 instance / S3 bucket**, enabling cloud-based data collection and management.
- Implemented a cost-optimized CI/CD workflow using **AWS Amplify**, automating builds and deployments while reducing hosting and operational costs through Amplify's pay-as-you-go model, cutting manual deployment effort by **60%** and improving release consistency.
- Configured AWS Amplify to automatically trigger build & deployment pipelines on Git commits, ensuring faster feedback and a fully serverless deployment workflow.
- Integrated the application with an **AWS database (RDS, DynamoDB)** to securely store and manage user registration data.
- Extracted, cleaned, and validated registration data using **Microsoft Excel (VLOOKUP, Pivot Tables)** to ensure accuracy and consistency.
- Automated portions of the **data extraction and cleaning process**, reducing manual errors and improving turnaround time for analytics delivery.

Here Technologies - Spatial Data Specialist

2022– 2023

- Analyzes and interprets geographic information from various sources like satellite imagery and lidar to solve real-world problems
- Utilized ATLAS platform to maintain and update spatial datasets with **98%+ accuracy**

PROJECTS

Reddit Deployment Project

2024– 2025

Built a production-like CI/CD pipeline to deploy a Reddit clone with DevSecOps practices.

- Set up **Jenkins** on an Ubuntu-based AWS EC2 instance.
- Configured and executed static analysis of application code using SonarQube, resolving 3 critical code smells, enhancing code maintainability and reducing potential technical debt by an estimated 10%.
- Performed vulnerability scans using **Trivy** on filesystems and Docker images.

- Built Docker images and pushed to **Docker Hub**.
- Deployed app on **Kubernetes** cluster, verified pods and services.

Chat-app Deployment

2024– 2025

Containerized and deployed a full-stack chat application on Kubernetes.

- Built **Docker images** for frontend, backend, and MongoDB services.
- Created Kubernetes YAML manifests for **deployment** and **services**.
- Exposed backend using **NodePort ensured** reliable communication between pods.
- Configured **Prometheus** and **Grafana** for monitoring and visualizing performance metrics with **HELM**.

ACHIEVEMENTS

- Successfully self-learned and implemented end-to-end CI/CD and Kubernetes setups within weeks.
- Recognized as a quick adapter to new technologies and tools in a fast-paced environment
